27 May 1952

MEMORANDUM TO: Director, Rad-Safe Group
FROM: Off-Site Operations Officer
SUBJECT: Integrated Dosage at Ely, Nevada during
SNAPPER/Easy Shot.

1. The integrated dosages mentioned below are based on the data inclosed.

2. It is estimated that the integrated dose at time infinity is from 400 mr to 500 mr; the 24-hour integrated dose is from 100 mr to 200 mr. In making these calculations it had been assumed the cloud passed Ely, Nevada at 0810, 7 May 1952, the fall-out began at 0900, and the fall-out stopped at approximately 1700. It should be noted that we cannot use the maximum reading at 0915 hours (see Inclosure #1) to estimate integrated dosages because this was the period of active fall-out and cloud passage. We have assumed that at H + 4 hours (0915 reading) 10 mr/hr additional was due to cloud passage and fall-out.

N. M. LUIEJIAN
Major, USAF
Off-Site Operations
Officer, Rad-Safe Group
