World Council of Churches Comment on Marshallese / English reports

MIHS has too many students and not enough teachers

MAJURO, 13 Sept. Heavy transfers from other schools, teacher shortage and not enough classrooms is making the Marshall Islands Public High School feel the crunch this new school year, according to Principal

Enrollment for this term

is over 650, the school's capacity of 600. Jetnil said he won't know the exact figure of enrollment until two weeks from now because of the many transfer students from other high schools. Registration transfer students continues for another week.

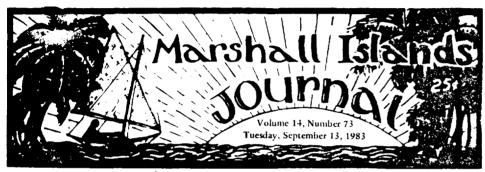

Jetnil said he doesn't know why the heavy transfers to MHS. "It may be that they can't pay for tuitions at other schools or for some other reasons," he said

Whereas there were 30 students per classroom in previous years, this term Continued page 4

Editorial Act Together

The split between the two parties is not as great as many think. Both are concerned with what is best for the Marshall Islands. They only differ in the method.

Development of the Marshall Islands should be the main concern of everyone living here. Don't rely on the government to give you everything. Work towards

Take a close look around you, see all the cans on the street. Pick one up and put it in a trash bin. If every one does this there will be less trash, and if people will stop littering, that is one step towards making Majuro and the Marshall Islands a better place to live. The broken down cars and trucks. They also need to be taken care of. But, just how much landfill can be done? Recycling could be the answer.

Which is more important - color TV and video tapes or 24-hour water. If more people would spend money up-

increase in the available water from the government. This is an example of helping the government out. How many times do you have to wait for the water hour to fill up your containers. Why not make use of your own roof. Many people have already done so, but nowhere near a majority.

Take a look at what the government is doing for you. They have started a new hospital construction in Delap. They are working on outer island dispensaries. It is up to you to use these facilities, before it is too late, and that costly medical referral to Hawaii. Don't put off going to the hospital if something is wrong. Many have, some of whom are not around anymore.

Above all, take the time to do those little things that will make the Marshall Islands a better place to live

Letter: Independence possible for Marshall Islands

August 17, 1983

Dear Editor: In his analysis of the Compact of Free Association, Henry Schwalbenberg states that since the Trusteeship can not end without U.S. permission it is doubtful that the U.S. would allow the Marshalls to become independent without much the same military authority it has with the Compact

Whether or not independence is wanted for the Marshall Islands is something only Marshallese can decide. colonial powers and their agents in the Pacific spend much of their time saying how impossible it is for the differisland groups to become independent.

Ten years ago, who would have thought the Republic of Vanuatu (formerly the New Hebrides) would be independ-ent today? The French cerent today? The French certainly didn't give Vanuatu "permission" to become independent. In fact, the French worked hard to slow Vanuatu's drive for independence, including supporting an armed re-bellion that threatened to disrupt the scheduled July 1980 date for independence. But the Vanuatu government withstood the pressures and is now independent.

More importantly, 3 years after independence, Vanuatu still receives the majority of its economic aid from its two former colonial rulers - France and Britain, even though prior to independence France threatened to withdraw its economic Economic disasters has not come to Vanuatu, and the colonial powers did not cut

hours a day, the electricity works, the government func-tions, Vanuatu is a United Nations member and has its own currency.

* * * * * *

Vanuatu in the early 1970's was in a dependent relationship similar to that of the Mar-shalls". France did not support independence for Vanua'u because it feared the indepen-dence "feyer" would spread to its other colonies: Tahiti (its nuclear test site) and New Caledonia (where a major portion or the world's nickel is).

Vanuatu's people their goal on independence in 1980, and were successful because they believed that only by ending colonial rule would they be trully free to govern their own lives and make decisions to improve their situation.

The United States will always say that the Marshaus "cauted have independence or that the Marshalls are not economically "ready" for independence because the U.S. has a self-in-terest in keeping the Marshall Islands under its military control. The question is, of course, who defines when a country is "ready"?

In international politics it is the determination of people to struggle for a goal, to identify alternative sources of funding that exist throughout the world, and to develop support of other nations for their desired political status that determines when a country is "ready." Pacific colonial history suggests that independence is there for those that

DIABETES:

Have you heard about this word-Diabetes? If you have not heard this word, let me tell you a little about diabetes so that you can understand what it means and how it happens. Nowadays in our beloved Republic, most of the government employees have Diabetes. Which means they are DIABETIC. WHY - Because of what they ear some People don't really care what they eat. Food is very important in the management of diabetes, so let's think about food and digestion. We take some food chew it in our mouth, and then swallow it. The food goes down to where it is digested. Digested means to break up into small pieces which go into your stomach and further down to your small intestines. Food has 3 substances: Fats, Proteins, Carbohydrates. Different Foods contain different amounts of some or all of these. When foods containing carbohydrates are eaten, the carbohydrate is digested to sugar. The blood goes around the body carrying the sugar with it to all parts of the body. The body is made of tiny pieces called cells, and each of these body cells needs the sugar from the blood so that the cell can work properly. The cells in the muscles use the sugar to produce energy so our body can work properly and energetically. It's very important that our cells get sugar they need, but the sugar is not able to go from the blood to the cells by itself. It needs help. The sugar helper is called Insulin. Insulin helps the sugar out of the blood and into the cells. Insulfn is something which we make inside our body in a special part of the body called pancreas or sweet bread. Because the pancreas makes insulin we refer to it as the insulin factory. A Diabetic person has a lazy pancreas. Remember that insulin is very important for helping the sugar out of the blood. In diabetic people, sugar stays in the blood because there is not enough insulin to help the sugar out and into the cells.

There are some people whose pancreas makes enough insulin but still they are diabetic. These people are obese (fat). They have diabetes because they're too fat, and the fat gets in the way of insulin's work. The fat stops insulin from taking the blood where it is needed. These people also have too much sugar in their blood.

we know two reasons for diabetes: The first one is because they have a lazy pancreas which does not make enough insulin; the second is because they are too which gets in the way of insulin to stop it from rking. Too much sugar in the blood means danger. working. Too much sugar in th Remember you are what you eat.

Jenks appointed District Engineer

Tuesday, September 13, 1983

News Release

US Army Corps of Engineers
Colonel Michael M. Jenks has
been appointed as the U.S.
Army Corps of Engineers' Honolulu District Engineer and also as the Deputy Division Engineer of the Corp' Pacific Ocean Division, effective Sept-

Colonel Jenks succeeds Colonel Alfred J. Thiede, who had been the District Engineer since September 1982. Colonel Thiede has been appointed as Special Assistant to Brig. Gen. Robert M. Bunker, Pacific

Ocean Division Engineer.
Colonel Jenks was Deputy
District Engineer for the Corps
at Norfolk, Va., before reporting to the Pacific Ocean Division headquarters at Fort Shafter. Prior to the Norfolk District assignment, he served as the Staff Engineer for the U.S. Army Western Command at Fort Shafter for two years.

His other major duty assign-ments include the Office of the Assistant Secretary of the

PRIDE BEFORE THE FALL

Introduction

From page 1

by a local ecumenical planning committee comprised of leaders from the United Church and the Catholic

The purposes of the visit were: (i) to assess the residual radiation problem as an environmental and health hazard; (ii) to study the social and human cost of the US military presence; (iii) to consult with the churches of the Mashalls regarding these the Marshalls regarding these questions; and (iv) to explore with the churches, in the context of the WCC's standing concerns for peace and disarmament, long-term strategies for mobilizing the commitment of the churches

around the world on these

It should be noted that white the team included an exper' on radiation and its effects, it did not presume to take up a highly technical role. This was essentially a church visitation team sent as an expression of church concern, willing to listen to all persons and groups having significant messages about that situation. We saw our role to be interpresse, reflective, consultative and directed towards a chorer, more helpful response on the part of the churches. it should be noted that while

part of the churches.

Among the categories of people we encountered were: people displaced from neir land, groups that experie ced high levels of radioactive fallout, people living in "temporary" homes or are affected because their land is continually used for US presence and missile testing, officials of the Marshall is ands Governments and cher officials of the Marshall Islands

Radiation and Relation Questions

physical debility, a birth anomaly or other abnormality, the people tend to believe that such had not occured before "The Bomb". Cases of fish "The Bomb". Cases of fish poisoning, unusual plant disease, the demise of the highly valued arrowroot plant (a traditional staple), seem invariably to be altributed to radiation, to be attributed to radiation, even though this is contrary to scientific evidence. Myth or reality, these anxieties and fears are painfully real, and they are a consequence of the testing program

they are a consequence of the testing program.

The radiation question is a difficult one, even for scientists who have been working with it for many years. Many dedicated US scientists have been involved in an extensive effort over many years to assess and treat the effects of radiation exposure of Marshallese and to monitor the residual radioactival. monitor the residual radioactivity comtaminating many of the islands in the northern atolls. It would appear that they have performed with honesty, and in most cases — particularly in recent years — with a reasonable level of competence. Nevertheless, it is always possible to identify areas where more attention should have been focused. Two such areas which have become critically important are (i) the education of the Marshallese on the nature of radiation and its human and environmental effect and (ii) providing adequate monitor the residual radioactiv fect and (ii) providing adequate medical care and compensation for victims of the atomic bomb test. Related to the first area the recent US Department of Energy (DOE) books on the radioactive contamination of Enewetok, Bikini, and the northern atolls have been al-most totally ineffective, and in some instances, counterproduc-tive in explaining the nature of radiation and the effects of the residual radioactive contamin-ation on human health. These books have been ineffective even though written in Mar-shallese and Engish and clearly aimed at a lay audience. Most Marshallese simply cannot un-derstand the text. Moreover, the presentation of the results in terms of the average risk of dying of cancer — perhaps presented this way in an effort to simplify the issue — tends to mask the variability of the data and its uncertainties, making some instances, counterproduc-

and its uncertainties, making the results misleading. With regard to the second area, the US medical surveillarea, the Os medical surveini-ance program conducted by Brookhaven National Labora-tory under DOE contract is a narrowly focused research ef-fort to identify the late effects for to identify the late effects of radiation in the most heavily exposed Marshallese people. The treatment by the US of radiation induced health effects and compensation for these effects which have been largely but not totally limited to those effects which have been clearly identified by the surgillance. effects which have been clearly identified by the surveillance program as being radiation induced, mainly, thyroid abnormalities among those most heavily exposed to the fallout from the Bravo test. Health effects that have not been statistically linked to radiation in the Marshallese population under study are generally not treated — exceptions have been made but generally these have

made hut generally these have not been in accord with Brookhaven's contract with DOE - and the victims are not compensated. In effect, the burden of proof lies not with the US to demonstrate the disease is not radiation induced, but with the victim to demonstrate that it was.

The US Government - and perhaps the United Nations - should consider whether the medical surveillance program who have been categorized as 'unexposed controls' should be so categorized; and whether the level of compensation and the people who qualify for it are appropriately defined.

Neatly everyone with whom

Nearly everyone with whom we spoke felt that the Marshall Islands has serious, unique health problems and inadequate care (the lack of health care facilities is obvious even to the casual observer); that all of the people should be given comprehensive health care regardless of whether they have been categoized as "exposed" or "unexposed"; that the new Marshall Islands Government does not have adequate capa-Marshall Islands Government does not have adequate capacity to do this; and that it is the responsibility of the US government not just to give funding, but to ensure by all reasonable means that such care is made available. Moreover, a Marshalls governmentendorsed independent medical survey might be helpful in moving more decisively in this direction. direction.
There is widespread distrust

There is widespread distrust by Marshallese of US scientists involved in radiation monitoring and health surveillance programs. Anomy the Marshallese who are participants in the Brookhaven surveillance program some have even said, "the Marshallese are geing used as guinea pigs", "and that the fallout from the 1954 Bravo test was not an accident." as 'guinea pigs', "and that the fallout from the 1954 Bravo test was not an accident." Unfortunately the scientists working today are forced to carry the baggage of inistakes and changes in policy accumulated over the past 37 years. We heard ulterior motives attributed to the DOE's educations efforts regarding residual radiation. Some charge that scientists are giving conflicting messages. These are strong, perhaps even paramoid statements. But though they may be difficult to accept they must be seen for their significance in the cynicism and frustration which they reflect. The problem of the primary contaminated atolls, Bikini and Enewetok, is deeply troubling

Enewetok, is deeply troubling A serious cleanup attempt is being made at Enewetok, at a A serious cleanup attempt is being made at Enewetok, at a reported expenditure of \$218 million. In the light of the drastic measures and unusual lifestyle required for resettlement, it is not yet clear if many of the people will choose to return. Bikini poses a more difficult case than Enewetok, and thus far the US Government has taken the position that cleanup would be too expensive. It would seem that a profound moral and legal question is posed here for the global community. Who is to decide upon such weighty matters of land abuse and restoration? While even a very imperfect cleanup at Bikini could cost several hundred million dollars, some Marshallese pointed out that the US Government is spending much more that that amount on just 2 few weapons such as the MX missiles, now being tested at Kwajalein. At one meeting an articulate young man asked, "Why can the US do whatever it chooses?"

US Security Needs and Kwajalein Atoll

III. US Security Needs and Kwajalein Atoll

Al a most basic level, this situation must be seen as one of the many tragic effects of the arms race. It was the US perception of its own security needs which was the driving force behind the testing program and now the way in which the new political arrangements are evolving. While a most basic level, this which the new political arrangements are evolving. While
the US would clearly like to
resolve and be free with the
Pacific Islands Trust Territory,
its current military requirements are having major impact
upon the political, economic
and social status of the new
nation. nation.

nation.

It is at the Kwajalein Atoll
where we see the embodiment
of this question. The Kwajalein people, most of them now lein people, most of them now living in crowded dismal conditions on 27 Ha. (67 acres) Ebeye Island, are seeking, thus far unsuccessfully, to attain a measure of restoration to their land, which is being used as part of the missile testing range. The determination of the Kwajalein people working through an organization known as the Kwajalein Atoll Corporation, is a remarkable story in itself. The Kwajalein people will without inoitit p. 2 Pry role in this continuing debate.

"The Lawyers"

Lawyers

IV. "The Lawyers"
Lawyers and the litigation to pursue health damage and land claims have become a significant, often troubling political factor. This, too, is is a consequence of the weapons testing program. Are the people being exploited in new ways through the lawyers, even as they deal with older injustices? Is there an unfortunate "pull" towards money solutions, or compensation, rather than long-term restoration of the basic relationship between the people and their land and culture? Perhaps, but the lawyers apparently have brought these greatly disadvantaged people a new means of much-needed power, and it would be most unwise to jeopardise this by attacking their sensitive lawyer-client relationship.

The Church in the Marshalls

V. The Church in the Marshalls
The Church in the Marshall
Islands has played and will
apparently continue to play a
nurturing and comforting role
rather than one of advocacy.
In this fragmented society the
church is a relatively strong

church is a relatively strong, self-reliant indigenous institution where people can come together in spite of their division. In communities where virtually all persons

belong to the church, and where virtually all members of the local government councils are church people, it is the custom to speak on political and economic matters through civic channels.

While we have regretted to it a clear, official church statement has not come forward from the Maishalls on these concerns, many church people Lave spoken out, and we must Lust Continued page 8

Critical Issues to be addressed by the **Ecumenical** Movement and the International Community

VI. Critical Issues to be VI. United Issues to be Addressed by the Ecumenical Movement and the International Community

1. While this report is openly critical of US policy and

practice in the Marshall Islands, practice in the starshall islands, we must point out that this situation is in a deep sense just a part of the wider problem of the global arms race. The alternation of the difficulties of alternation of the difficulties of the Marshallese prople will depend largely upon reducing the need for continued strat-egic weapons tests. (Jur response as a global church must be seen in relation to the biblical mandate for peace-

biblical manuale for peace-making.

2. Ordinary people in the Marshall Islands consistently told us that the regional and world church must continue to world church must continue to make peopl more aware of what is happening there. The churches should continue to play a responsible role in strengthening the accountability of the United States and the United Nations for what is happening in the Pacific Island Trust Territory. We should continue to seek guidance from the churches of the Marshalls in fulfilling this role.

in fulfilling this role.

3. Long-term questions of political status are especially pointeal status are especially critical at this moment in history. Unresolved health, land and economic problems will tend to influence long-term political decisions. It is

important that there be a maximum of open public dismaximum of open public dis-cussion on the proposed new political status. The churches, both within and outside the Marshalls, should seek to play a constructive role in this pro-cess, particularly in raising value questions.

cess, particularly in raising value questions.

4. In light of serious, unique health problems, a much higher level of health care is needed for the Marshall Islands, for the

for the Marshall Islands, for the whole population, and on a continuing basis. Consulatation is needed to determine potentially effective ways for promoting this.

5. Profound moral and legal questions are raised in the matter of the radiation-contaminated atolis. Who shall decide and upon what basis shall they or shall they not be "cleaned". It would seem appropriate for the churches to "cleaned". It would seem appropriate for the churches to project such questions, even if final action would seem totally dependent upon US willingness

dependent upon US willingness to respond.

6. The Marshallese people will be living with the reality of ionizing radiation for a long time to come. Efforts at educating them about it are extremely important. Thus far, however, such efforts have not been effective. It appears that the level of trust for the US Department of Energy is so US Department of Energy is so low that this educational task

low that this educational task should be taken up by some other, more trusted group. 7. A related, but slightly different point than 6: We found that a serious lack of leconical information exists in the Marshalis about the radia-tion problem. It would seem important that the US Government make an unreserved effort to supply and the Covernment of the Marshalls to serve as eustodian for a basic Library and file of technical reports and papers accessible to interested persons and groups.

8. In no way would we jeopardize the effectiveness of the lawart working to briting server.

pardize the effectiveness of the lawyer seeking to bring a greater measure of justice of the Marshallese groups engaged in litigation against the US Government for health, encironmental and other claims. At the same time, if might be helpful for the Government of the Marshalls to establish guidelines for the lawyers, in the interest of the Marshallese groups, including guidelines for

lines for the lawyers, in the interest of the Marshallese groups, including guidelines for lawyer's fees.

9. Since the sittin demostration last year at Kwajalein (called "Operation Homecoming" by the Marshallese), the k-aijalein Missile Range Base officials have taken an unnece-arily harsh line against the Marshallese community at Ebeye We would hope that even though many of the basic, long term questions have not been -solved, the people, as the rightful owners of Kwajalein, will be treated with dignity and respect, that Base official will give serious consideration to their complaints, and nother limit nor withhold essential services.

P.S. — A more detailed version along with a complete itinerary and some historical notes may be obtained from the Commis-sion of the thurches on Inter-national Affairs of the World Council of Churches (150, route de Ferney, Geneva, Swit-zerland), which organized the visit.
