Victor P. Bond, MD.  
Associate Director  
Brookhaven National Laboratories, Inc.  
Upton, New York 11973

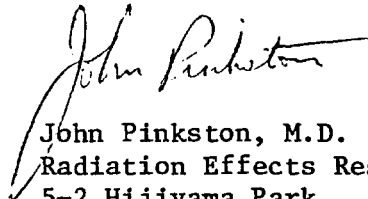

Dear Dr. Bond:

It was a pleasure to have been able to speak with you during your recent trip to Japan, and I hope your return trip to the U.S. was a pleasant one.

You indicated that in addition to the Marshall Island project, there might exist the opportunity for me to participate in some other research going on at Brookhaven. My laboratory interests center around radiation and immune system interactions, as well as carcinogenesis, particularly radiation carcinogenesis. My interest in carcinogenesis is at the cellular and subcellular levels as well as at the intact organism and population levels. Perhaps you could briefly describe the current work in these areas now being done at Brookhaven, or alternatively, ask investigators in this area to briefly describe their work with a few references.

I am now in the process of making some initial inquiries concerning clinical radiotherapy and will keep you posted on any developments along this line.

Sincerely yours,

John Pinkston, M.D.
