healthcare
 current sys (\$3.106/yr from TT)

2 hosp. 60 bed Nijiro

40 bed Ebene (Kirij.)

run down, not up to any standard
 60-70 dispensaries run by ^{"health assistants"} ~~local workers~~

no organized tpt (depends on

irregular coconut ships)

~~cost~~ ^{80%} of the \$3M spent on health care

at Honshuku (ind. sec. care) →

better exp. at ~~TT~~ would avoid this

cost effective to have an effective, comprehensive

health care system meeting dev. obj. status

rather than exp. depending on outside

support

Would need 9M/yr to improve (esp. of the
 sec and add test case for the extent that
 referrals → Honshuku are minimized)
