Thyroid Nodules Including Hypothyroidism in the Marshallese Populations as of March 1968

Persons Exposed on	Age at Exposure	Whole Body Gamma Dose (rads)	Estimated Added Thyroid Dose from I*, (rads)	No. in Group	No. and Percent with Nodules
Rongelap Island	<10	175	700 - 1400	19	17 (90%)
	>10	175	160	36	2 (5.5%)
Ailingnae Island	<10	69	275 - 550	6	0
	>10	69	55 ₋	8	1 (12.5%)
Utirik Island	<10	14	55 - 110	40	0
	>10	14	15	59	2 (3.4%)
Control Marshalle		61 133	0 0	0	0 3 (2.3%)

^{*} Estimates of the doses to the thyroids of the Rongelapese were recomputed by R. James and J. Gofman, UCRL #12273. December, 1964. Estimates of the thyroid doses of the Ailingnae and Utirik people were by proportionality to the respective whole body gamma doses.
