SUBJECT: SHEEP LOSSES AROUND CEDAR CITY

SYMBOL: BMB:PBP

In Salt Lake City on October 3 I talked with Dr. Monroe Holmes, UPHS veterinarian. He said that Mr. Brower, County Agent at Cedar City, had reported that some of the sheepmen thought they were having heavier losses of lambs on the range this summer than in previous years. Apparently these remarks were made by one or two of the sheepmen who suffered heavy losses in the spring.

The sheepmen will not have any accurate counts on their sheep until they bring them down from the high mountain summer ranges. This will be between the 7th and 16th of October.

It appears that it would be desirable to follow up the herds of the owners who had heavy losses in the spring and find out if they have had abnormal losses this summer. Arrangements have been made for Dr. Holmes and Dr. Arthur Wolff, both of the USPHS, to make a trip to Cedar City sometime after October 15th to obtain additional information on the summer operations of the sheepmen.

The last month or six weeks it has been unusually dry on the summer ranges east of Cedar City. It has been so dry in the Nevada winter range area north of the NPG that there is very little feed and it is doubtful if the Cedar City sheepmen will be able to move their sheep to the Nevada range as is their normal practice.
