RE: LANDING RAMP - TARE

DATE 20 JULY 1953

Please refer to your teletype HW 8271 of 2 July 1953 wherein we were authorized to proceed with the design and construction of a landing ramp at Site Ursula. This work is underway.

We feel that there may also be a requirement for a similar ramp at Site Tare. If there is such a requirement, it would be highly desirable to accomplish the work as early as possible in order to realize the maximum advantage of this ramp for cargo handling operations. The ramp would also be of value in the maintenance of marine equipment.

It is requested that you determine if a ramp is contemplated for Site Tare in the scientific program, and advise regarding approval for construction by return teletype.
