Clearing - George

May 19, 1953

Mr. P. W. Spain, ABC, letter PG-8-2143 dated May 14, 1953, approved the clearing of the "Crossroads" structures from Site George and stockpiling of the earth cover.

This involves 5 earth-covered quonsets and 4 or 5 fifty-foot towers. Mr. Spain further requested that we determine if it is possible to use any of the towers for future survey towers or other installations. If so, we are to salvage the towers.

I believe that the towers should be salvaged if they are in fair condition, even though no present need is known.

Please furnish this office with schematics showing dimensions and member sizes of towers salvaged.

You may consider this as authority to perform the above.
