Howard P. Palmer  
Director of Indus. Rel.

JOB 884

FROM: Charles C. Custer, MD

RE: Additional Hospital Space - Site Tare

DATE: 23 March 1953

This material is restricted in its distribution and its use is limited to the manner to which it is authorized by law.

Mr. Spain in conversation before his departure authorized eight additional beds on Site Tare. Coupled with our new thinking in regards that jobsite, the following plans are submitted with specifications.

1. Plans submitted for both 16 and 24-foot trusses.
2. Whatever the final plan, because of increased personnel at the site, the present storage facilities will be totally inadequate and, therefore, the new structure must contain a storage room.
3. Whether joined to or adjacent to the present dispensary, toilet facilities will be necessary because of the function of the building. A minimum of a utility sink and corrodium must be provided and additional toilet facilities would be welcome.
4. Scuttlebutt will be necessary.
5. Eight more hospital beds will be necessary, complete with mattresses.
6. Building must be completely screened, including doors.
7. Shutters with metal stoppers preferable to wooden stoppers.
8. Concrete block on the present surgery entrance should be increased to a 6' x 10' apron.
9. A building attached to the present building is probably preferable, but depends on available space.
10. One other solution might be to abandon the present building, and start afresh with plans originally submitted for a ten bed dispensary, and re-locate to a more advantageous site. If possible there would be a reasonable re-use of the present building.
