Erection of Cryptographic Room

DATE

28 March 1953

I have information from Hill Lewis that Paul Spain has asked for the installation of automatic cryptographic equipment at Site Tare. Lewis has contacted the Signal Corp and been told by them that they will eventually require a building about 24 feet square but that they can operate temporarily in the room marked "storage" in the Administration Building and they will move in there in the near future. In the meantime Lewis is letting Spain know of their future requirement. If he agrees to the construction of such a building I suggest that you give its location consideration along with the proposed camp expansion to 1,500 men.
