The copy of Dr. Tobin's final report received here is not of reproduceable quality. We are asking LLL to prepare copies for distribution at May 22 meeting and some extras for here. A copy we have may be borrowed.

Dear Walt:

Enclosed is the final copy of my report titled The Enewetak People: A Special Report For The Radiological Survey of 1972-73.

You will note that I have added a map of Ujilang Atoll and additional data including a page on the Enewetak gene pool. Other data have been added to the report submitted previously and changes have been made for better reportage. Names have been added to the map of Enewetak as well.

This report therefore supersedes the one which I submitted to you previously and which you circulated among the evaluation group and others. Please notify these people that this report is the final one and supersedes the copy that they may have. The latter should be taken out of circulation.

We are preparing for the Enewetak Rehabilitation Planning Meeting to be held here next week. Six Ujilang (Enewetak) leaders will arrive this weekend perhaps. The American participants will start arriving next Sunday.

Feeling is high against the PACE Project. It might be well for the AEC representatives to explain their position in this situation. As I wrote you previously the Ujilang (Enewetak) People apparently lump AEC and PACE in one destructive category.

I will be waiting to hear from you in regard the final report, as I wrote you last week.

BEST COPY AVAILABLE

Sincerely,

Jack A. Tobin
