1. Future Test Program

Dr. Graves outlined the proposed test shots to be made in Operation UPSHOT in the spring of 1953. In addition to the weapons effects test and the external initiator tests, several mockup tests are planned leading to the development of weapons to be tested in Operation CASTLE. The shots to be made in CASTLE would be largely dependent upon the results of these mockup tests in UPSHOT. Dr. Graves added that UPSHOT would include tests for both LASL and Berkeley. In some cases it would be possible to conduct experiments for both laboratories using two sides of one tower shot.
