1. Discussion with Mr. Darol K. Froman

Mr. Dean asked Mr. Froman whether the Russians would be able to estimate the approximate yield of the two shots at IVY and also whether they would be able to determine that a device incorporating a thermonuclear reaction had been exploded. Mr. Froman replied that if they have detection devices similar to ours, they can probably determine whether the shot incorporates a thermonuclear reaction or not, but he doubted whether they can estimate the yield. (See AEC 483/32 subsequently circulated)
