

Soil - Imp Data

R

The name of the island is given in the English and native name. The date given at the end of the line is when the data were collected; the IMP number is given also but detectors have been interchanged.

A and B composites are shown under the soil sample section. "uncorr ratio" is the soil/IMP (ratio) before the IMP value was corrected for % brush.

"corr ratio" is the soil/IMP (ratio) computed after the IMP value was corrected for % brush.

The IMP values are shown with the brush correction (corr Am-241) and without the brush correction (uncorr Am-241).

Enjebi is not included

Regression information

Islands included in the regression analysis are:
Pearl (Lujor), Irene (Boken), Vera (Alambel),
Olive (Aej), Sally (Amon), Lucy (Kidrinen),
Belle (Bokombako), Alice (Bokoluo), Clara (Kirunu),
Kate (Mijikadrek), Daisy (Lauj), Nancy (Elle),
Mary (Bokenelab), Tilda (Bijire), Ruby (Elelron) &
Wilma (Billae).

The Imp data was corrected for % Brush before
the regressions were run.

Three analyses were done using the A & B composites
separately (each on log and linear data) - one with
all islands included, one with the islands Ruby & Wilma
data deleted and the final one excluded the data
from Sally, Ruby and Wilma. The reason these
islands were excluded is that the activity on these
islands was so low that it was below the detection
limit of the Imp.

The regression (log & linear data) was also done
looking at the average of the A & B composites,
excluding the 3 islands mentioned above. On
the linear scale, the regression line will
be the same as when using the separate
composites.

Regression for all islands
using the A & B composites separately.

Linear

$$\text{mean of soil} = 11.0254 \quad \bar{Y}/\bar{X} = 1.2388$$
