I've read through the booklet and have no major criticisms or suggestions for improvement. The numbering of paragraphs is a good idea, but some numbers are missing or in the wrong place.

P. 2 Definition for beta radiation. Delete "from the atom it comes from".

P. 3 The title for page 20 in the table of contents does not agree with that for page 20.

P. 4 Delete "are set apart [distinct] because they" .
Paragraph 1
3rd line

as possible. Thank you for your help.

WJB:ms

Enclosure

Bill - I've made my comments on the draft. They are relatively minor except for the exposure scenarios and numerical body counts, where every-
thing appears to be screwed-up. I assume the every-other and every-third year scenarios were something Weisgall forced on you? They really seem ridiculous to me. I also think it would be a serious tactical error not to point out the consequences of time spent on islands of the atoll other than Bikini and Eneu.
