

APPENDIX I

411381

1. The rockets have at present the following characteristics:
 - (a) Standard Navy HVAR Rocket with modified head.
 - (b) Maximum altitude equals 18,500 feet.
 - (c) Rise time to maximum altitude: 31s; fall time 36s.
 - (d) Landing velocity equals 900 fps.
 - (e) Penetration at 900 fps is marginal through 4 ft of sand backed by 18 inches of moderately reinforced concrete.
 - (f) Dispersion: 50% of rockets land in circle of 2500 feet radius about aiming point.

2. Tentative firing schedules for the rockets are:

- (a) Engebi
 - (1) 32 rockets launched from center of Engebi (2500 feet from tower)
 - (2) Launching time: $T_0 - 30$ sec
 - (3) Landing time: $T_0 + 37$ sec
- (b) Acomon
 - (1) 32 rockets launched from approximate center of Acomon (2600 feet from tower)
 - (2) Launching time: $T_0 - 10$ sec
 - (3) Landing time: $T_0 + 37$ sec

APPENDIX II

1. The probability of damage is based on the assumption of a uniform distribution of the rockets within the 50% circle about the aiming point. Since rockets land in a circular gaussian distribution, this assumption understates the probability somewhat for objects located near the aiming point and overstates it for objects far from this point. It should be borne in mind, also, that hits by rockets are mutually exclusive events. Thus the probabilities stated are somewhat higher than is rigorously the case.

- a. The probability of a hit on a particular object is given by:

$$P_{obj} = \frac{\text{Area of object (} 32 \times 0.50 \text{)}}{\text{Area of 50\% circle}}$$
$$(\text{Area of Object}) (8 \times 10^{-7})$$

- b. The probability of hitting any object of a particular group of similar objects is given by:

$$P = \sum P_{obj}$$

- c. The probability of hitting any n of a group of objects is approximately:

$$P_n = P^n$$

- d. The probability of a particular object suffering n hits by rockets is approximately:

$$n P_{obj} = P_{obj}^n$$

2. It should be noted that every part of the top area of an object is not equally important so that damage probability is again overstated. In the discussion in the text of the memorandum, no attempt has been quantitatively made to allow for this factor.
